Lowland Calcareous Grassland

The definition of the habitat as given in the pre-existing Habitat Action Plan

(<https://webarchive.nationalarchives.gov.uk/20110303145955/http://www.ukbap.org.uk/UKPIans.aspx?ID=12>) has been amended to:

- include examples of NVC CG10 *Festuca ovina-Agrostis capillaris-Thymus praecox* grassland where they clearly occur below the upper limits of agricultural enclosure; and
- exclude examples of CG1 *Festuca ovina-Carlina vulgaris* grassland and CG2 *Festuca ovina-Avenula pratensis* grassland where these clearly occur above the upper limits of enclosure.
- In Northern Ireland, enclosed calcareous grassland (mainly CG9 and CG10) is very limited and similar floristically to unenclosed grassland. For practical purposes all calcareous grassland in Northern Ireland is treated as Upland Calcareous Grassland.

Following the 2007 review, occurrences of this habitat on roadside verges are also covered by the definition.
